Mohiadeen Ameer

Principal Software Engineer — Backend & Kafka Platform Engineering

Round Rock, TX · 626-342-9487 · mohiadeen.ameer@gmail.com · linkedin.com/in/mohiadeen-ameer · github.com/mjameer

Principal engineer with 14 years of experience designing distributed backend systems in Go and Java, specializing in Apache Kafka and event-driven platforms on Kubernetes. Sets the technical direction for the job orchestration platform behind Dell OpenManage Enterprise (10,000 concurrent jobs in production), defined the Kafka-based Change Data Capture architecture now used as the reference design across product teams, and authored Dell's whitepaper on Kafka streaming. Confluent Kafka and CKAD certified.

Experience

Dell Technologies — Round Rock, TX
Principal Software Engineer — Apr 2025 – Present

- Lead architect of the Job Engine Orchestrator for Dell OpenManage Enterprise: event-driven Go microservices on Kubernetes (k3s), coordinated through Kafka with Valkey and PostgreSQL, running 10,000 concurrent jobs across ~100,000 managed servers in production.
- Defined the Change Data Capture architecture (PostgreSQL logical replication, Debezium on Strimzi Kafka Connect) that separates transactional and reporting workloads, cutting critical report generation from over 5 minutes to under 10 seconds (96%); adopted as the reference design for data migration across product teams.
- Authored Dell's published whitepaper on streaming OpenManage Enterprise alerts and telemetry through Kafka into Grafana, with an open-source reference implementation; built Go Kafka consumers that keep a real-time OpenSearch index of ~100,000 devices in sync without dual writes.
- Set the technical direction for the Job Engine Orchestrator within the 50-engineer OpenManage Enterprise organization; mentor three engineers on distributed-systems design.

TP-Link Systems Inc. — Irvine, CA
Staff Software Engineer — Oct 2024 – Apr 2025

- Designed the data-residency routing layer for the Tapo smart home platform, directing device data to AWS, Azure (Brazil) or Oracle Cloud (Vietnam) to meet regional privacy law through Istio service-mesh policies; reduced regional latency by ~40%.
- Led the move of service-to-service calls from REST to gRPC (30–50% lower latency) and sharded PostgreSQL with Apache ShardingSphere for horizontal scale.

Tata Consultancy Services — Kaiser Permanente — Pasadena, CA
Cloud Architect — Jan 2016 – Oct 2024

- Designed and built SupportPlus, an event-driven self-healing platform (Azure Event Grid, Azure Functions) that monitors 200+ critical healthcare applications and remediates failures automatically; saves ~$900K a year in support effort and was mandated as the resilience standard across portfolios.
- Led the migration of legacy healthcare monoliths to containerized services on AWS EKS, Azure AKS and OpenShift, owning provisioning, rollout automation and rollback.
- Built the shared CI/CD and Prometheus/Grafana observability platform used by 15+ product teams.

Tata Consultancy Services — Kaiser Permanente, USAA, Target — Chennai, India
Senior Software Engineer — Nov 2011 – Jan 2016

- Delivered CI/CD and releases for the migration of 50+ Java web applications; on-call lead for 30+ production applications.

Skills

Languages: Go, Java, Spring Boot, gRPC

Kafka & streaming: Apache Kafka, Kafka Connect, Strimzi, Debezium (Change Data Capture), event-driven architecture, CQRS

Data: PostgreSQL, PgBouncer, ShardingSphere, Valkey / Redis, OpenSearch

Platform: Kubernetes, k3s, OpenShift, Helm, Docker, Istio, OpenBao, Terraform, GitHub Actions

Cloud & observability: AWS (EKS, ECS, DynamoDB), Azure (AKS), Prometheus, Grafana, Loki, Tempo, VictoriaMetrics

Education & Certifications

Bachelor's, Electronics & Communication Engineering — Sri Krishna College of Engineering, Anna University — 2007 – 2011

Confluent Apache Kafka, 2023 · Certified Kubernetes Application Developer (CKAD), 2023 · Azure DevOps Engineer Expert, 2022
